

HIGH SPEED

Blazingly fast, screaming streaming!

When you move into your new apartment at the CODA on Crouse, our 10 Gig symmetrical fiber backbone Internet service will be at your fingertips. The CODA on Crouse has partnered with IQ Machines to bring you the fastest and most reliable Internet service in multi-unit / student housing. Work, homework, stream, game, doesn't matter you have the need for speed, and we've got it!

NO EQUIPMENT NEEDED, HIGH RELIABILITY - Just bring your devices... there is no need to buy or rent cable modems or wireless routers. Also, all the equipment at the property is automatically monitored 24x7 to ensure that your service is dependable.

MASSIVE DEDICATED BANDWIDTH, LOW LATENCY - The property uses a private Multi-Gbps fiber connection that is not shared with any other local homes or businesses. Your connection will never slow down, even at peak usage times. And with a direct connection to the data center, you will experience the lowest latency possible.

ULTRA HIGH SPEEDS, INCLUDING UPLOADS - The connection in your unit delivers speeds up to 1Gbps per device, for both UPLOADS and DOWNLOADS. Other complexes utilize cable company services and equipment which typically offer very limited upload speeds, sometimes 10 Mbps or less. At the CODA on Crouse, you can upload up to 100 times faster, so you can instantly share videos using YouTube or social media apps.

YOUR WI-FI, EVERYWHERE - The CODA on Crouse features more than 450+, enterprise-grade Wi-Fi 6 access points, so every inch of the property is covered with excellent Wi-Fi. And your service is not limited to your apartment - you can surf on your own secure private network, even when you are visiting a neighbor or using amenity areas.

EASY ONBOARDING - Upon moving in, residents are issued a single password, which is all you need to register your devices on the network. Unlike many other campus internet solutions, there is no need to authenticate devices like gaming consoles using MAC addresses, or other complicated registration methods.

NO INTERFERENCE - Forget problems caused by neighbors with wireless routers set to the same frequency as yours - the Access Points at the CODA on Crouse are centrally managed to ensure maximum speeds and minimum interference.
